SUMMARY

I ship supply-chain software that runs daily operations across seven facilities. Lately most of my work is wiring LLMs into products: semantic search, real-time transcription, and automated reporting.

EXPERIENCE

Flo Mattress — Full Stack Developer August 2025 - Present

Production Plan

Next.js · Express.js · MongoDB · BullMQ

- Led end-to-end development of the Production Plan across 7 facilities, processing 1.7k+ daily orders across 2,700+ SKUs with JWT authentication and role-based access controls.
- Engineered order prioritisation, batch allocation (300–500 orders), and lifecycle tracking across work-in-progress, vacuum completion, and dispatch.
- Automated batch-specific MRP label generation with QC markings, foam allocation suggestions based on BOMs, and scrap tracking for raw-material traceability.
- Integrated QC and dispatch state validation to prevent wasted dispatches, implementing cancellation, shipper-weight, and shipper-allocation checks.

Inventory Management

React.js · Express.js · MongoDB · Shadcn

- Built manufacturing inventory workflows for batch-based Goods Receipt Notes (GRNs) and QR-scan raw-material consumption with UUID-based QR label generation.
- Engineered BullMQ background workers to synchronise Unicommerce inventory and calculate per-order raw-material consumption from BOMs.

Vendor Replenishment & Vendor App

Next.js · Express.js · MongoDB · Tailwind CSS

- Developed Vendor Replenishment workflows and a standalone Vendor App supporting inward processing with QR labels.
- Created a 3PL warehouse stock dashboard with trend analysis, automated MOQ reordering, and norm-based stock-out alerts.

PROJECTS

Load Balancer

Go · Next.js · SQLite · Docker Compose

A Layer-7 HTTP load balancer in Go spreading traffic across servers behind a single endpoint, with round-robin, least-connections, and latency-based power-of-two-choices routing driven by live in-flight counts and response times. Lock-free request path, active health checks, graceful shutdown, async SQLite logging, and a Next.js live dashboard. Tested with 600 requests against slow, fast, and 10%-failing mock servers.

Speech-to-Text Workspace

Next.js · Fastify · Bun · FastAPI · PostgreSQL · Drizzle ORM · WebSockets

A real-time transcription platform routing audio across three engines: Groq Whisper, Google Gemini, and a self-hosted Whisper microservice (Whistle) containerised with Docker. Live audio streams over WebSockets, merging partial results into final transcripts and converting Indic scripts into readable Latin text. Includes transcript search, CRUD, and range-request audio playback.

Smart Bookmark

Next.js · Supabase · Gemini API · Jina AI · TypeScript

A bookmark manager that syncs across your devices. Uses Google Gemini so you can search your bookmarks with plain English queries. Jina AI scrapes pages into clean text before indexing. Has collections, favourites, a trash bin with 30-day recovery, and Google OAuth for sign-in.

GitHub Commit Report

n8n · Groq API · GitHub API · Telegram · Gmail · Google Sheets

Turns any GitHub user's commits into a plain-language daily summary with Groq. Skips already-reported commits via history in Google Sheets, routes the draft to Telegram for one-tap approval, and emails the confirmed version.

Academia

Flutter · Node.js · Express.js · SQLite · REST APIs

A student management app with three-tier role-based access across attendance, timetables, and exam results, backed by Node.js. Includes a progress dashboard, student profiles, and a notifications and events page surfacing updates to the right audience.

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, Shadcn, HTML
Backend	Node.js, Express.js, Bun, Go, REST APIs, JWT / OAuth, Microservices, FastAPI, Fastify, Python, WebSockets, BullMQ
Data	PostgreSQL, MongoDB, SQLite, Supabase, Redis, Drizzle ORM
Tools	Docker, Git, GitHub Actions, Postman, Linux, GitHub, Coolify

EDUCATION

Manipal University Jaipur 2024 - 2026

Master of Computer Applications (MCA) · CGPA: 8.79 · Jaipur

Keraleeya Samajam's Model College 2021 - 2024

Bachelor of Science in Information Technology · Percentage: 80.2% · Dombivli, Thane

VOLUNTEER

Melam 2.0 - Nair Welfare Association — Material Coordinator & Score Management Volunteer March 2026

- Managed material requirements and procurement for a 16-team tournament, ensuring all equipment and supplies arrived on schedule.
- Maintained score cards and managed real-time score display on CricHeroes throughout the tournament.

Yuva Jagraan 2.0 - Samanwaya Charitable Association — Time Coordinator & Crowd Management Volunteer

January 2026

- Managed event timelines and volunteer coordination for Career Walkthrough and Mental Wellness sessions with 200+ students across concurrent tracks.
- Oversaw crowd flow, enforced safety protocols, and verified venue and speaker readiness across all event stages.
- Served as central point of contact for real-time issue resolution during event operations.
